3) find first order and second order derivatives:

$$\begin{aligned}y &= x^2 \\ f'(x^2) &= 2x \\ f(x^2) &= 2\end{aligned}$$

plugin the values:

$$\begin{aligned}\frac{2}{(1 + 2(x^2)^{\frac{3}{2}})} \\ \frac{2}{1} &= 2 \\ k &= x_0 \\ \frac{1}{k} &= \frac{1}{2}\end{aligned}$$
